

SPECIFICATION

SILENCIO ACOUSTIC FOLDING WALL SYSTEM - TYPE M85

The Silencio Acoustic M85 Folding Wall System incorporates a series of flat panels (each up to 900mm wide) that are hinged together to give a flush appearance when closed. The panels are manoeuvred on either a ceiling mounted track or an ultra low floor track.

The M85 folding wall systems are quick to operate and are available in a range of acoustic ratings from 30dB-49dB. Sound attenuation is achieved by modern manufacturing methods and the unique panel construction that consists of an aluminium frame, particle board cladding and multiple acoustic infill's.

Applications

All systems can be supplied for openings of unlimited width on straight or curved track. Special lead posts are available to provide for cross, 'T' and 'L' junctions. All installations are made to measure for specific applications and we offer a complete design and installation service.

Operation

Both systems can be used as single units, or in pairs, operating with standard No.8 Aluminium track, recessed or surface-mounted.

Finishes

As with operable walls, the M85 folding wall systems can be supplied in an almost endless choice of finishes, including veneers, laminates, wall coverings and fabrics. There is also the option of standard, or flush mounted hardware for the door panels.

Options

Partially or fully glazed panels, ceiling or floor track, choice of hardware.

Key Features & Benefits

- Hinged panels for quick and easy operation
- Robust aluminium frame construction for demanding environments
- Wide range of surface finishes
- Ceiling or floor mounted to accommodate most building designs
- End pass door incorporated enabling access to adjoining rooms
- Partial and fully glazed panels available
